The following is an examiner's statement of reasons for allowance: Terada et al. (US 5067209; figures 1, 3, 5) is the closest art of record and teach zipper structure comprising a pull tag 3, a base 1 for receiving a zipper chain and a universal joint between the pull tag 3 and base 1 to permit 360° rotation and tilt as shown in figure 3. The universal joint comprises the swivel connection including disk 2 and its connection to the pull tag. In regard to claim 1, there is no suggestion in the art of record to modify the slider of Terada et al. such that there are two holders formed on the upper half of the base that carry a central pin, which extends through and is bolted in a central hole in an axis wherein the universal joint connects the pull tag to the axis. As to claim 9, the universal joint of Terada et al. is not an arc tooth base with a ball body wherein the ball body is arranged at a top of the base with the arc tooth base pivotally connected to the pull tag. To the contrary, Terada et al. requires two orthogonal pivoting axes, one vertical through opening 8, the other horizontal around pins 11 of the pull tag, thereby showing that Terada et al. lacks the claimed added pivotal connection of the pull tag with the base and there is no motivation to provide another pivotal connection with the pull tag or utilize the general teaching of an arc tooth universal connection taught by Amdahl (US 5653548; figures 1, 3b) to modify the teachings of Terada et al. so as to orient a ball body at a top of the base with the further provision of an added pivotal connection with the pull tag.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
